

# Detailed Syllabus for SF2935: Modern Methods of Statistical Learning, 7.5 Credits (Autumn 2025)

This advanced course in statistical learning dives into modern methods and their theoretical foundations. While the core focus is on conceptual understanding and mathematical principles, the material will be reinforced through empirical demonstrations using a variety of datasets.

The basic syllabus is available at <https://www.kth.se/student/kurser/kurs/SF2935/?l=en>. This document provides a detailed course plan, including information on the main texts, tentative schedule, assessment structure, and recommended supplementary resources.

## 1 Main Texts

The main text for this course is:

- *The Elements of Statistical Learning: Data Mining, Inference, and Prediction*, by Trevor Hastie, Robert Tibshirani, and Jerome Friedman (2nd edition, corrected 12th printing, 2017). Available at: <https://hastie.su.domains/ElemStatLearn/> (ESL)

We aim to cover approximately 70% of the materials in ESL, supplemented with:

- *Learning Theory From First Principles*, by Francis Bach (final version, 2025). Available at: [https://www.di.ens.fr/~fbach/ltfp\\_book.pdf](https://www.di.ens.fr/~fbach/ltfp_book.pdf) (Bach)

These texts provide both theoretical and practical foundations for the methods covered in the course. Additional reading materials may also be assigned periodically to supplement the main texts.

## 2 Tentative Schedule

\*All lecture and tutorial sessions are held from 13:00-15:00 except the sessions on Aug 29 and Sep 19 (15:00-17:00).

Date	Session	Topic	References (ESL / Bach)
Aug 26	1	Course Introduction, Fundamentals of Supervised Learning & Risk Minimization	ESL Ch. 1-2 / Bach Ch. 2
Aug 28	2	Model Evaluation: Bias-Variance Tradeoff, Model Assessment & Selection	ESL Ch. 2, 7 / Bach Ch. 2
Aug 29*	3	Tutorial	ESL + Bach
Sep 2	4	Linear Methods for Regression	ESL Ch. 3 / Bach Ch. 3
Sep 4	5	Linear Methods for Classification, Regularization	ESL Ch. 4-5
Sep 5	6	Tutorial	ESL + Bach
Sep 9	7	Support Vector Machines, Kernel Methods	ESL Ch. 6, 12 / Bach Ch. 7
Sep 11	8	Generalization Theory: VC Dimension, Rademacher Complexity & Bounds	ESL Ch. 7 / Bach Ch. 4
Sep 12	9	Tutorial	ESL + Bach
Sep 16	10	Tree-Based Methods, Ensemble Methods I: Bagging	ESL Ch. 9-10 / Bach Ch. 10

<b>Sep 18</b>	<b>11</b>	Ensemble Methods II: Boosting & Random Forests	ESL Ch. 10, 15 / Bach Ch. 10
<b>Sep 19*</b>	<b>12</b>	Tutorial	ESL + Bach
<b>Sep 23</b>	<b>13</b>	Neural Networks I: Perceptrons, MLPs, Backpropagation & Optimization	ESL Ch. 11 / Bach Ch. 5
<b>Sep 25</b>	<b>14</b>	Neural Networks II: Universal Approximation & Deep Architectures (CNNs, RNNs, Transformers)	Bach Ch. 9 + additional materials
<b>Sep 26</b>	<b>15</b>	Tutorial	ESL + Bach
<b>Sep 30</b>	<b>16</b>	Neural Networks III: Theory for Overparameterized Models	Bach Ch. 12 + additional materials
<b>Oct 2</b>	<b>17</b>	Unsupervised Learning: Dimensionality Reduction & Clustering	ESL Ch. 14
<b>Oct 3</b>	<b>18</b>	Tutorial	ESL + Bach
<b>Oct 7</b>	<b>19</b>	Probabilistic Methods: Bayesian Inference & Variational Methods	ESL Ch. 8 / Bach Ch. 14
<b>Oct 9</b>	<b>20</b>	Generative Models Intro: VAEs, GANs & Diffusion Models	Additional materials
<b>Oct 10</b>	<b>21</b>	Tutorial	Additional materials
<b>Oct 17</b>	<b>-</b>	<b>Final Project Submission Deadline</b>	-
<b>Oct 23</b>	<b>-</b>	<b>Final Exam</b>	-

### 3 Assessments and Grading

The final grade for the course will be based on the following components:

- Biweekly assignments (3 in total): 30%
- Final project: 30%
- Final exam: 40%

Further details regarding the format, expectations, and evaluation criteria for each component will be provided during the course.

### 4 Additional Resources

The following additional references may also be useful for deepening your understanding of the topics covered:

- *An Introduction to Statistical Learning*, by Gareth James, Daniela Witten, Trevor Hastie, and Robert Tibshirani (2nd edition, 2021)
- *Pattern Recognition and Machine Learning*, by Christopher M. Bishop (2006)
- *Deep Learning: Foundations and Concepts*, by Christopher M. Bishop and Hugh Bishop (2024)
- *Probabilistic Machine Learning: An Introduction*, by Kevin P. Murphy (2022)
- *Patterns, Predictions, and Actions*, by Moritz Hardt, Benjamin Recht (2022)
- *Understanding Machine Learning: From Theory to Algorithms*, by Shai Shalev-Shwartz and Shai Ben-David (2014)

- *Foundations of Machine Learning*, by Mehryar Mohri, Afshin Rostamizadeh, and Ameet Talwalkar (2nd edition, 2018)
- *Learning from Data*, by Yaser S. Abu-Mostafa, Malik Magdon-Ismael, and Hsuan-Tien Lin (2012)
- *Deep Learning*, by Ian Goodfellow, Yoshua Bengio, and Aaron Courville (2016)
- *Neural Networks and Deep Learning*, by Michael Nielsen (2015)
- *Scikit-learn: Machine Learning in Python\** (available at <https://scikit-learn.org/stable/>)
- *Dive into Deep Learning (D2L)\**, by Aston Zhang, Zachary C. Lipton, Mu Li, and Alexander J. Smola (available at <https://d2l.ai/>)
- *Practical Deep Learning for Coders\**, by Jeremy Howard (available at <https://course.fast.ai/>)
- *PyTorch in One Hour: From Tensors to Training Neural Networks on Multiple GPUs\**, by Sebastian Raschka (available at <https://sebastianraschka.com/teaching/pytorch-1h/>)

\*: useful references for coding and implementation in Python and PyTorch
